1.

rocketMQ3.2.6安装 https://github.com/alibaba/RocketMQ

执行nohup sh mqbroker -n 127.0.0.1:9876 &

报错 java.lang.ExceptionInInitializerError

Caused by: java.net.UnknownHostException: xxxxxxx: 未知的名称或服务

解决方案: http://www.easytd.com/yichangjijin/d_16012708270.html

vi /proc/sys/kernel/hostname

或者

sysctl kernel.hostname=localhost

nohup sh mqnamesrv -n 127.0.0.1:9876 &

The Name Server boot success.

nohup sh mqbroker -n 127.0.0.1:9876 &

The broker[localhost, 192.xxxx.xxx.128:10911] boot success. and name server is 127.0.0.1:9876

进程:

root 16148 15609 0 12:46 pts/1 00:00:00 sh mqnamesrv -n 127.0.0.1:9876

      import com.alibaba.rocketmq.common.message.Message;
98.
09.
      public class Producer {
10.
         public static void main(String[] args) throws MQClientException,
11.
                InterruptedException {
12.
13.
              * 一个应用创建一个Producer,由应用来维护此对象,可以设置为全局对象或者单例<br>
14.
              * 注意: ProducerGroupName需要由应用来保证唯一<br>
              * ProducerGroup这个概念发送普通的消息时,作用不大,但是发送分布式事务消息时,比较关键,
15.
16.
              * 因为服务器会回查这个Group下的任意一个Producer
              */
17.
18.
             DefaultMQProducer producer = new DefaultMQProducer("ProducerGroupName");
19.
             producer.setNamesrvAddr("192.1xx.xxx.1xx:9876");
20.
             producer.setInstanceName("Producer");
21.
22.
              * Producer对象在使用之前必须要调用start初始化,初始化一次即可<br/>obr>
23.
24.
              * 注意: 切记不可以在每次发送消息时,都调用start方法
              */
25.
26.
             producer.start();
27.
28.
              * 下面这段代码表明一个Producer对象可以发送多个topic,多个tag的消息。
29
30.
              *注意: send方法是同步调用,只要不抛异常就标识成功。但是发送成功也可会有多种状态, <br>
              * 例如消息写入Master成功,但是Slave不成功,这种情况消息属于成功,但是对于个别应用如果对消息
31.
      可靠性要求极高, <br>
              * 需要对这种情况做处理。另外,消息可能会存在发送失败的情况,失败重试由应用来处理。

创建topic

[root@PjmLinuixCentOs6 bin]# sh mqadmin updateTopic -n 192.168.164.128:9876 -c DefaultCluster -t TopicTest1

create topic to 192.xxx.xxx.xxx:10911 success.

TopicConfig [topicName=TopicTest1, readQueueNums=8, writeQueueNums=8, perm=RW-, topicFilterType=SINGLE_TAG, topicSysFlag=0, order=false]

运行Producer程序,系统报错 no route info of this topic rocketmq 原因linux的系统防火墙没有对外开放相关端口,停用防火墙

1) 重启后生效

开启: chkconfig iptables on 关闭: chkconfig iptables off 2) 即时生效,重启后失效 开启: service iptables start 关闭: service iptables stop

再次运行Producer程序:

8:04:36.789 [NettyClientWorkerThread_1] DEBUG io.netty.util.ResourceLeakDetector - -

Dio.netty.leakDetectionLevel: simple

18:04:37.001 [NettyClientSelector_1] DEBUG io.netty.util.internal.Cleaner0 - java.nio.ByteBuffer.cleaner(): available
